Pre-work

Set Up Development Org

1. Create a new Trailhead Playground or Developer Edition Org for this superbadge. Using this org for any other reason might create problems when validating the challenge. If you choose to use a development org, make sure you deploy **My Domain** to all the users. The package you will install has some custom lightning components that only show when My Domain is deployed.
2. Install this unlocked package (package ID: 04t6g000008av9iAAA). This package contains metadata you'll use to complete this challenge. If you have trouble installing this package, follow the steps in the Install a Package or App to Complete a Trailhead Challenge help article.
3. Add picklist values Repair and Routine Maintenance to the **Type** field on the Case object.
4. Update the Case page layout assignment to use the **Case (HowWeRoll) Layout** for your profile.
5. Rename the tab/label for the Case tab to Maintenance Request.
6. Update the Product page layout assignment to use the **Product (HowWeRoll) Layout** for your profile.
7. Rename the tab/label for the Product object to Equipment.
8. Use App Launcher to navigate to the **Create Default Data** tab of the **How We Roll Maintenance** app. Click **Create Data** to generate sample data for the application.
9. Review the newly created records to get acquainted with the data model.

1. Automated Record Creation

Step 1: Go to the App Launcher -> Search How We Roll Maintenance -> click on Maintenance Requests -> click on first case -> click Details -> change the type Repair to Routine Maintenance -> select Origin = Phone -> Vehicle = select Teardrop Camper-> save

Step 2: Feed -> Close Case -> save

Step 3: Go to the Object Manager -> Maintenance Request ->Field & Relationships ->New ->Lookup Relationship -> next -> select Equipment ->next -> Field Label = Equipment ->next->next ->next -> save

Step 4: Go to the developer console

2.Synchronize Salesforce data with an external system

Setup -> Search in quick find box -> click Remote Site Settings -> Name = Warehouse URL , Remote Site URL = https://th-superbadge-apex.herokuapp.com.

Go to the developer console,

WarehouseCalloutService.apxc

```
public with sharing class WarehouseCalloutService {

    private static final String WAREHOUSE_URL = 'https://th-superbadge-
apex.herokuapp.com/equipment';

    //@future(callout=true)
    public static void runWarehouseEquipmentSync(){

        Http http = new Http();
        HttpRequest request = new HttpRequest();

        request.setEndpoint(WAREHOUSE_URL);
        request.setMethod('GET');
        HttpResponse response = http.send(request);

        List<Product2> warehouseEq = new List<Product2>();

        if (response.getStatusCode() == 200){
